

SOC Case Note Templates

Condensed formats for closing out cases directly in the case description field

1. Short-Form Template

For standard Low/Medium alerts that need a quick, defensible close-out. Enough detail to justify the verdict without writing a full triage report.

Alert ID: [ID]
Date/Time: [detected] | Analyst: [name] | Severity: [Low/Med/High/Crit]

Summary: [What triggered the alert, on which host/user – 1 sentence]

Investigation: [Key checks made and what was found – 2-3 sentences, cite log source/tool]

Indicators: [defanged IP/domain/hash – known-bad/good/unknown]

Verdict: [True Positive / False Positive / Benign Positive] – [why, 1 sentence]

Action Taken: [Isolated host / Blocked IOC / Disabled account / No action]

Escalated: [Yes/No – to whom, if yes]

Conclusion: [What it turned out to be and outcome – 1 sentence]

2. One-Liner Template

For low-severity or auto-closed alerts, when volume matters more than depth. Keeps an audit trail without slowing down the queue.

[Date/Time] | [Alert ID] | [Alert type/host] | Verdict: [FP/Benign] – [reason, brief] | Action: [None/Auto-remediated] | Analyst: [name]

Example

07/24 09:14 | ALT-4821 | Failed login spike - WKSTN-22 | Verdict: FP – user locked out, self-resolved | Action: None | Analyst: K.Ilolo

Note: if the same host or rule keeps generating repeat false positives on the one-liner, that's the trigger to bump it up to the short-form template for detection tuning notes.
