

Threat Hunting Investigation Report

Host: [hostname(s) investigated]
Investigation Date: [event timeframe] — reported [report date]
Analyst: [name]
Tools Used: [e.g. Splunk (SPL), Sysmon, Windows Event Logs, VirusTotal]
Status: [Open / Closed — malicious activity confirmed / Closed — benign]

Executive Summary

[One paragraph. State what was investigated, what was found, and the outcome — written so someone who reads only this section understands the incident. End with a one-sentence bottom line.]

Scope and Environment

- **Host(s) investigated:** [hostname / IP]
- **User context observed:** [account names involved]
- **Log sources:** [list the specific log channels/sources queried]
- **Index:** [Splunk index or data source name]

Attack Chain Timeline

Time	Tactic	Activity
[HH:MM:SS]	[MITRE tactic]	[What happened, in plain language]

Detailed Findings by Tactic

[**Tactic name, e.g. Execution**] — [1-3 sentences describing what was found and how it was confirmed.]

[**Tactic name, e.g. Persistence**] — [1-3 sentences describing what was found and how it was confirmed.]

[**Tactic name, e.g. Defense Evasion**] — [1-3 sentences describing what was found and how it was confirmed.]

[Add additional tactic sections as needed]

Indicators of Compromise

Indicator	Type	Description
[defanged IP/domain/hash/filename]	[IP / Domain / File / Registry / Service / Named Pipe]	[What it is and why it matters]

MITRE ATT&CK Technique Summary

Tactic	Technique ID	Technique Name
[Tactic]	[T####.###]	[Technique name]

Impact Assessment

[What access, data, or capability did the confirmed activity give the attacker? Note any gaps in visibility — e.g. if logs were cleared or tampered with, say so and note that full scope can't be confirmed from log data alone.]

Recommendations

- [Containment action, e.g. isolate host from network]
- [Remediation action, e.g. remove specific files/persistence mechanisms found]
- [Network action, e.g. block specific IOCs at the perimeter]
- [Credential action, e.g. reset credentials for affected accounts]
- [Hunting action, e.g. check other hosts for the same pattern]
- [Detection improvement, e.g. close a visibility gap that made this harder to find]

Conclusion

[One sentence: what was confirmed and how, written the same way you'd close out any of your individual hunt reports.]
