

Windows Event ID Reference

114 native Windows Event IDs across Security, System, Application, and key operational logs, sorted numerically.

Event ID	Log / Provider	Summary	Description
12	System — Kernel-General	System Startup	The operating system started.
13	System — Kernel-General	System Shutdown	The operating system is shutting down.
21	TerminalServices-LocalSessionManager	RDP Session Logon	Remote Desktop Services: session logon succeeded.
22	TerminalServices-LocalSessionManager	RDP Shell Start	Remote Desktop Services: shell start notification received.
23	TerminalServices-LocalSessionManager	RDP Session Logoff	Remote Desktop Services: session logoff succeeded.
24	TerminalServices-LocalSessionManager	RDP Session Disconnected	Remote Desktop Services: session has been disconnected.
25	TerminalServices-LocalSessionManager	RDP Session Reconnected	Remote Desktop Services: session reconnection succeeded.
41	System — Kernel-Power	Unexpected Reboot	The system rebooted without cleanly shutting down first.
98	RemoteDesktopServices-RDPCoreTS	RDP TCP Established	A TCP connection has been successfully established.
104	System — Eventlog	System Log Cleared	The System event log was cleared.
106	Task Scheduler	Scheduled Task Created	A user registered a new scheduled task.
131	RemoteDesktopServices-RDPCoreTS	RDP Connection Accepted	The server accepted a new TCP connection from a client.
140	Task Scheduler	Scheduled Task Updated	A registered scheduled task was updated.
141	Task Scheduler	Scheduled Task Deleted	A registered scheduled task was deleted.
200	Task Scheduler	Scheduled Task Launched	A scheduled task was launched.
201	Task Scheduler	Scheduled Task Completed	A scheduled task completed.
1000	Application — Application Error	Application Crash	An application crashed.
1001	System — Windows Error Reporting	Application Crash Report	Windows Error Reporting logged details of an application crash.
1002	Application — Application Hang	Application Hang	An application stopped responding.
1024	TerminalServices-RDPCClient/Operational	RDP Client Connecting	RDP ClientActiveX is trying to connect to the server.
1033	Application — MsIInstaller	Software Installed	Windows Installer installed a product successfully.
1034	Application — MsIInstaller	Software Removed	Windows Installer removed a product successfully.

Event ID	Log / Provider	Summary	Description
1074	System — User32	Planned Shutdown/Restart	The system was shut down or restarted by a process or user request.
1102	Security — Eventlog	Security Log Cleared	The audit (Security) log was cleared.
1116	Windows Defender/Operational	Malware Detected	The antimalware platform detected malware or other potentially unwanted software.
1117	Windows Defender/Operational	Malware Action Taken	The antimalware platform took action to protect the system from malware.
1118	Windows Defender/Operational	Malware Action Failed	The antimalware platform attempted to take action against malware but failed.
1119	Windows Defender/Operational	Critical Malware Action Failed	The antimalware platform attempted a critical action against malware but failed.
4103	PowerShell/Operational	Module Logging	Records details of PowerShell pipeline execution (module logging).
4104	PowerShell/Operational	Script Block Logging	Records the content of executed PowerShell script blocks.
4608	Security	System Startup (LSASS Init)	Windows is starting up; LSASS has initialized.
4609	Security	System Shutdown	Windows is shutting down.
4616	Security	System Time Changed	The system time was changed.
4624	Security	Logon Success	An account successfully logged on.
4625	Security	Logon Failure	An account failed to log on.
4634	Security	Logoff	An account was logged off.
4647	Security	User-Initiated Logoff	A user initiated the logoff process.
4648	Security	Explicit Credential Logon	A logon was attempted using explicit credentials (e.g. RunAs).
4656	Security	Object Handle Requested	A handle to an object (file, registry key, etc.) was requested.
4657	Security	Registry Value Modified	A registry value was modified.
4660	Security	Object Deleted	An object was deleted.
4661	Security	Kernel Object Handle Requested	A handle to a kernel object was requested.
4662	Security	Operation on Object	An operation was performed on an object (often Active Directory).
4663	Security	Object Access Attempt	An attempt was made to access an object.
4670	Security	Permissions Changed	Permissions on an object were changed.

Event ID	Log / Provider	Summary	Description
4672	Security	Special Privileges Assigned	Special (admin-level) privileges were assigned to a new logon.
4673	Security	Privileged Service Called	A privileged service was called.
4674	Security	Privileged Object Operation	An operation was attempted on a privileged object.
4675	Security	SIDs Filtered	SIDs were filtered during a cross-domain logon.
4688	Security	Process Creation	A new process has been created.
4689	Security	Process Exit	A process has exited.
4697	Security	Service Installed	A service was installed on the system.
4698	Security	Scheduled Task Created	A scheduled task was created.
4699	Security	Scheduled Task Deleted	A scheduled task was deleted.
4700	Security	Scheduled Task Enabled	A scheduled task was enabled.
4701	Security	Scheduled Task Disabled	A scheduled task was disabled.
4702	Security	Scheduled Task Updated	A scheduled task was updated.
4720	Security	User Account Created	A user account was created.
4722	Security	User Account Enabled	A user account was enabled.
4723	Security	Password Change Attempt	An attempt was made to change an account's password.
4724	Security	Password Reset Attempt	An attempt was made to reset an account's password.
4725	Security	User Account Disabled	A user account was disabled.
4726	Security	User Account Deleted	A user account was deleted.
4728	Security	Added to Global Group	A member was added to a security-enabled global group.
4732	Security	Added to Local Group	A member was added to a security-enabled local group.
4735	Security	Local Group Changed	A security-enabled local group was changed.
4737	Security	Global Group Changed	A security-enabled global group was changed.
4738	Security	User Account Changed	A user account was changed.
4740	Security	Account Locked Out	A user account was locked out.
4756	Security	Added to Universal Group	A member was added to a security-enabled universal group.

Event ID	Log / Provider	Summary	Description
4767	Security	Account Unlocked	A user account was unlocked.
4768	Security	Kerberos TGT Requested	A Kerberos authentication ticket (TGT) was requested.
4769	Security	Kerberos Service Ticket Requested	A Kerberos service ticket was requested.
4770	Security	Kerberos Service Ticket Renewed	A Kerberos service ticket was renewed.
4771	Security	Kerberos Pre-Auth Failed	Kerberos pre-authentication failed.
4772	Security	Kerberos Ticket Request Failed	A Kerberos authentication ticket request failed.
4776	Security	NTLM Credential Validation	The domain controller attempted to validate credentials for an account (NTLM).
4778	Security	RDP Session Reconnected	A session was reconnected to a Window Station.
4779	Security	RDP Session Disconnected	A session was disconnected from a Window Station.
4781	Security	Account Name Changed	The name of an account was changed.
4800	Security	Workstation Locked	The workstation was locked.
4801	Security	Workstation Unlocked	The workstation was unlocked.
5140	Security	Network Share Accessed	A network share object was accessed.
5142	Security	Network Share Added	A network share object was added.
5144	Security	Network Share Deleted	A network share object was deleted.
5145	Security	Network Share Access Check	A network share object was checked to see whether the client can be granted desired access.
5152	Security	WFP Packet Blocked	The Windows Filtering Platform blocked a packet.
5156	Security	WFP Connection Allowed	The Windows Filtering Platform allowed a connection.
5157	Security	WFP Connection Blocked	The Windows Filtering Platform blocked a connection.
5379	Security	Credential Manager Read	Credential Manager credentials were read.
5857	WMI-Activity/Operational	WMI Provider Started	A WMI provider was started.
5858	WMI-Activity/Operational	WMI Provider Error	A WMI provider reported an error.
5859	WMI-Activity/Operational	WMI Quota Violation	A WMI quota violation occurred.
5860	WMI-Activity/Operational	WMI Consumer Binding	A WMI temporary event consumer was bound.

Event ID	Log / Provider	Summary	Description
5861	WMI-Activity/Operational	WMI Permanent Consumer Registered	A WMI permanent event consumer was registered — commonly used for WMI persistence.
6005	System — Eventlog	Event Log Service Started	The Event Log service was started (system boot).
6006	System — Eventlog	Event Log Service Stopped	The Event Log service was stopped (clean shutdown).
6008	System — Eventlog	Unexpected Shutdown	The previous system shutdown was unexpected.
6416	Security	External Device Recognized	A new external device was recognized by the system.
7034	System — Service Control Manager	Service Crashed	A service terminated unexpectedly.
7035	System — Service Control Manager	Service Control Sent	A start or stop control was sent to a service.
7036	System — Service Control Manager	Service State Change	A service entered the running or stopped state.
7040	System — Service Control Manager	Service Start Type Changed	A service's start type was changed.
7045	System — Service Control Manager	New Service Installed	A new service was installed on the system.
8001	WLAN-AutoConfig	WiFi Connected	WLAN AutoConfig successfully connected to a wireless network.
8002	WLAN-AutoConfig	WiFi Connection Failed	WLAN AutoConfig failed to connect to a wireless network.
8003	WLAN-AutoConfig	WiFi Disconnected	WLAN AutoConfig successfully disconnected from a wireless network.
11004	WLAN-AutoConfig	Wireless Security Stopped	Wireless security stopped.
11005	WLAN-AutoConfig	Wireless Security Succeeded	Wireless security succeeded.
11707	Application — MsInstaller	Install Successful	Product installation completed successfully.
11708	Application — MsInstaller	Install Failed	Product installation failed.
11724	Application — MsInstaller	Uninstall Completed	Product removal (uninstallation) completed successfully.
20001	Security — Plug and Play	PnP Device Connected	A Plug and Play device connection event was recorded.
20003	System — Plug and Play	PnP Device Install	A Plug and Play device install event was recorded.

Note: Event IDs are not globally unique across Windows — the same number can mean different things under different providers/logs (e.g. Event ID 12 under Kernel-General vs. other providers). The Log / Provider column identifies which source each entry belongs to.
